Features Introduction

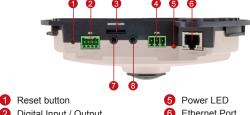

OZT Technology

OZT technology combines three valuable features - Overview, Zoom and Tracking – to be able to automatically track any suspicious object over a wide area. The intelligent hemispheric camera with overview capability can be paired with a speed dome camera, and hence instructs the speed dome camera to zoom-in and track the object in a detailed manner.

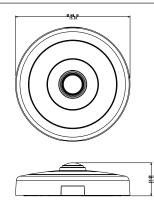

The hemispheric camera and speed dome camera can be installed in flexible distance from each other. Upon the installation, both units are automatically calibrated without any user action required. The pair is then ready to automatically track moving objects.
